

# Signing Services

## Fully digital business enabled

Enhance your online channels and systems with e-signing capabilities to provide services and run business processes fully digitally.

Legally binding electronic signing and trustworthy electronic identities enable online business even where traditionally things were managed in person on paper. Meanwhile, organisations are struggling to provide winning user experience and fully digital customer journey to meet the needs of the digitally demanding customers and employees. Digital business is the new reality.

SigningServices is an enterprise software solution that focuses on user experience, security and simplified process of electronic signing. Micro-services architecture and simplified APIs make integration of e-signing in your IT landscape fast and reliable. SigningServices applications provide powerful ready to use e-signing tools for your business. SigningServices is deployed on your company's infrastructure giving you full control over the e-signing processes and information security. No document leaves your firewalls.

### Fully digital customer experience

Embed SigningServices in to your online services, customer portals and applications to provide completely remote and outstanding customer service.

### Digital business processes

Enhance your document management, HR, CRM, ERP, workflow or other systems with SigningServices to boost efficiency and reduce manual work in your business processes.

### Great e-signing user experience

E-signing is simplified for users to just a few clicks and PIN entry.

### Security and full control

Solution is deployed on your infrastructure and no document leaves your firewalls.

### Quick and easy implementation

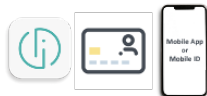

Simplified APIs for integration and out-of-the-box connectors for major software platforms.

## How it works

Once SigningServices is added to your online channel or business system, wherever an e-signature is required, users have the option “Sign”.

User initiates signing in your online channel or internal system.

Chooses his preferred e-signing mean from those available in the region.

Enter his personal PIN codes according to the chosen e-signing tool.

User authentication, e-document generation, validation, signing, archiving and other related tasks previously done by users are handled by SigningServices.

## For companies

Signing Services enable your employees to efficiently and securely manage all electronic signing processes and your IT teams to enhance your online channels and business systems with electronic signing functionality. SigningServices API platform, Sign-box solution for business users to manage e-signing processes, Sign-ons for information management systems from Microsoft, OpenText, DocuWare and others are available.

### Micro-services architecture

Leveraging Java and Spring Boot framework technologies, SigningServices can be run on any JAVA runtime environments with best practices from continuous development and continuous integration.

## For service providers and product owners

Enhance your services and product offering with electronic signing functionality to add value to your customers and reach new markets. We'll take care of the signing capability for you.

### Ready-to-use components

Web-applications for user interactions, multiple supported archives for information storing and managing, sample postman projects and other tools to meet your company's needs and deliver seamlessly.
